Computing the Mind

How the Mind Really Works*

Shimon Edelman
Cornell University

August 2007

*The only book explaining how the mind works that also contains a usable map of the London Tube (see p. 274). You'll need a magnifying glass, though.

Contents

Contents **vi**

I Foundations **1**

1 Brains, Minds, and Numbers **3**
1.1 Minds as organizational entities 4
1.2 Minds as computational entities 6
1.3 About this book 9

2 Computing Minds **13**
2.1 Representations, and what they are good for 13
2.2 Varieties of representations 20
2.3 Varieties of computation 26
2.4 The heart of the mind: hierarchical abstraction 30
2.5 Computation *ad astra* 32

3 Computing Brains **37**
3.1 The building blocks: neurons and synapses 38
3.2 Functional architecture of the brain 42
3.3 Neural computation 50

4 The Astonishing Hypothesis **63**
4.1 Experimental neuroepistemology 64
4.2 The Marr-Poggio program 69
4.3 What kind of computer the brain is 77

II Faculties **83**

5 Perception **85**
5.1 Perceptual measurement 87

5.2 Representation spaces 92
5.3 Perceptual constancies 98
5.4 Perceptual learning 106
5.5 Truth 121
5.6 Beauty 130
5.7 What it means to see 138
5.8 Coda 143

6 Memory **155**
6.1 Memory: a bestiary 157
6.2 Memory is for interaction with the world 158
6.3 Simple memory 160
6.4 Navigation and events 172
6.5 Concepts 178
6.6 Self and others 194
6.7 Conceptual simulation 201
6.8 Neurobiology of memory 206
6.9 Using memory 211
6.10 Being used by memory 222

7 Language **235**
7.1 The structure of language 236
7.2 Learning language structure 247
7.3 Language in context 276
7.4 Language as a (neuro)biological phenomenon 285
7.5 Using language 293

8 Thinking **315**
8.1 Computational elements of thinking 317
8.2 Problem solving 318
8.3 Reasoning 334
8.4 Decision making 353
8.5 Thinking out of the box 364

III Finale **393**

9 Being No One **395**

9.1 Attention 397
9.2 Modes of awareness 409
9.3 The phenomenal Self 412
9.4 Access consciousness 427
9.5 The narrative Self 438
9.6 Narratives of others 443
9.7 Altered states 447
9.8 Gone beyond 455

10 Imagine **463**
10.1 Selfhood and freedom 463
10.2 Ethics 472
10.3 Whosoever is wise? 480

11 The Mind in the Act of Finding **497**
11.1 On the nature of the quest 497
11.2 What we have learned 499
11.3 Where we are headed 503
11.4 Mind games forever 504

A Bayesian inference and decision making **511**
A.1 The Bayes Theorem 512
A.2 Using the Bayes Theorem 513

B Mind the Gap **515**
B.1 Some of the things not included in this book 515
B.2 How this book really ends 519

Bibliography **521**

Index **587**

Credits **609**
